New Features of Version 6.55

This update provides the following features:

✧ EDIUS can be installed and run within the Windows 8.1 Preview (operating system).

    * This version of EDIUS will also be supported by the final official release of Windows 8.1.

UPDATE HISTORY

The following issues are fixed or improved in this version.

File exporter cannot preserve disabling of some options

Description: File exporter presets do not preserve the unselection of the "Creating waveform cache" option.

Incorrect video is printed when exporting to XDCAM files

Description: Incorrect video frames are printed when exporting to XDCAM files with the segment encode function.

Audio track path disappears after using match frame

Description: After matching a frame from a GV STRATUS EDL or CMF list that is opened as a sequence, all audio track paths disappear from the timeline except for Track A1.

ProTools fails to import an AAF file that is generated by EDIUS

Description: Audio clips become offline if an AAF file that is generated by EDIUS is loaded into ProTools.

Burned Blu-ray Disc cannot play audio

Description: Blu-ray Discs created by EDIUS that feature MPEG-2 video with LPCM audio data will not play audio.

The EDIUS graphical user interface displays an incorrect drop shadow

Description: If a clip is dragged and dropped from Windows Explorer to the timeline, EDIUS displays an incorrect drop shadow effect around the clip.

EDIUS reads MXF index files too many times

Description: EDIUS reads MXF index files too many times while loading MXF clips from SNFS drives.

EDIUS accesses XDCAM media unnecessarily

Description: EDIUS continues to access XDCAM media even after clips from that media have been transferred already.

Exported video cannot be loaded onto JVC memory camera

Description: If the timeline is exported onto a JVC SDHC card with the XDCAM EX format, JVC cameras cannot load the video from the card.
